NETWORKS
An International Journal

Subject Index to Volume 37, 2001

2-role assignment, 67

Aborescences, 8
Adaptive least-expected time paths, 35
Adversarial queuing theory, 219
All shortest paths, 225
Antisymmetrical digraphs, 202
Applications, 21
Approximate reasoning, 53
Approximation algorithms, 8
Approximation scheme, 8
Arrangement graph, 84

Balanced-flow networks, 202
Barriers, 194
Bayesian networks, 53
Blossom inequalities, 210
b-matching problems, 210
Branch and cut, 74
Broadcast, 94
Butterfly graph, 156

Capacitated arc routing problem, 134
Capacitated matching problems, 194, 202, 210
CARPIF, 134
Characterization, 225
Chordal graph, 53
Circulant graphs, 129
Comb inequalities, 210
Combinatorial optimization, 8, 74
Combined k-Hamiltonian graphs, 165
Cooperation and coordination, 53
Cuts, 194

Data networks, 35
Diameter, 165
Distance-hereditary graphs, 117
Distributed computation, 53
Domination problem, 117
Duality, 194
Dynamic costs, 225
Dynamic stochastic networks, 35

Edge-connectivity, 144
Embedding, 84

Factor theorems, 194
Fault tolerance, 84
Fault-free paths, 84

Gallai-Edmonds decomposition, 194
Graph algorithms, 8, 117
Graph augmentation, 144
Graph theory, 53
Group Steiner Problem, 8

Homogeneous sets, 117

Integrity, 102
Intelligent transportation systems, 35
Interconnection network, 84
Intermediate facilities, 134
Interval routing, 225

Journal history, 1

k-broadcast, 94

Linear time algorithm, 117
Logical relations, 21
Longest path, 84

Maximum-closure, 171
Maximum-flow, 171
Minimizing drop cost, 107
Minimum broadcast graphs, 94
Minimum spanner, 156
Minimum-cut, 171
Mixed integer linear programming, 74
Modular decomposition, 117
Multiagent systems, 53
Multiply sectioned Bayesian networks, 53

Network algorithms, 35
Network design, 74
Network flows, 194, 202, 210
Network reliability, 129
Network stability, 219
Node expansion, 165
Nordhaus-Gaddum-type result, 102
NP-completeness, 67

Odd sets, 194
Odd-set inequalities, 210
Open-pit mining, 171
Optimal routing, 35

Optimal trees, 74

Partially renewable resources, 21
Polynomial deterministic algorithm, 144
Primitive ring, 107
Project management/scheduling, 21
Protocol stability, 219

Ring grooming, 107
Role assignment, 67
Role coloring, 67

Scattering number, 102
Sensitivity analysis, 171
Shortest paths, 35
Skew-symmetric graphs, 202
Social networks, 67
Social role, 67
SONET ring, 107
Spanner, 156
Spanning subgraph, 156
Spanning trees, 129
Steiner problem, 8
Steiner trees, 8

Toughness, 102
Triangulation, 53

Undirected multigraph, 144
Uniform costs, 225
Upper and lower bounds, 94

Vertex-connectivity, 144

Wave-length minimization, 107
